

Claims:

1. A ball joint comprising: a housing with an opening portion; a ball head portion rotatably housed in this housing; a ball stud with a stud portion provided in a protruding manner from this ball head portion, protruding from said opening portion and a brim portion provided in a protruding manner on an outside surface of this stud portion; and an elastic approximately pipe-formed dust cover inserted through said stud portion, provided across an outside surface of said housing and an outside surface of said stud portion so as to block said opening portion, wherein

said dust cover is provided with a first lip portion which is closely fitted in a manner urged toward a ball head portion-side end face of said brim portion and a second lip portion which is closely fitted in a manner urged toward an outside surface of said brim portion.

2. The ball joint as set forth in Claim 1, wherein the first lip portion is, in a manner urged toward a ball head portion-side end face of the brim portion, closely fitted like a surface to a part of this end face.

3. The ball joint as set forth in Claim 1 or Claim 2, wherein

the second lip portion is, in a manner urged toward an

outside surface of the brim portion, closely fitted like a surface to a part of this outside surface.

4. The ball joint as set forth in any of Claim 1 through Claim 3, wherein

the dust cover is provided with a pocket portion provided between the first lip portion and second lip portion and brim portion of the ball stud, retaining a lubricant member inside.
